

basic the smart alternative

The latest in the RSF PortaDAP product line, the Basic really benefits from RSF's long experience in the audio-guide field and offers a modern and affordable solution.

With a memory of approximately three hours, high quality digital sound and an advanced ergonomic design, the Basic has everything needed for a large variety of audio tour applications. In addition, the Basic can be programmed to include several languages making it particularly flexible and suitable for visitors from a wide range of countries.

The Basic revolutionises audio guides by using two standard AA batteries with a life of up to three months. By dispensing with charging racks, the Basic dramatically decreases handling and storage needs, making it particularly suitable for a "self-service" type of distribution.

But the most attractive feature is the Basic's price. This low-cost alternative can be used for exhibitions of all sizes - and it can be adapted to bring vitality and innovation to the exhibits on display.

Be smart ... The Basic offers ease of use at an affordable price.

basic : the smart alternative

Easy to use, comfortable, ergonomic design

The Basic's size, shape and weight were carefully designed to ensure comfortable, effortless and ergonomic usage. Its well-designed keypad, including a raised dot on the 5 button, and standard colour codes for "stop," "play," and volume buttons, makes the Basic easy to use by young and old, as well as the visually impaired. Induction loops for the hearing impaired are also available.

High quality digital sound

The Basic offers high quality sound using the new digital compression technology developed by RSF, the SR3. At its next stage of development, the SR3 technology will allow messages to be recorded directly into the unit reducing production costs for sites with tight budgets.

Sound and speech, multi-language capacity

The Basic has approximately three hours (170 minutes) of memory capacity and allows the mixed storage of music and speech in several languages inside the unit. A double capacity version is also available (340 minutes).

Ready to use

The audio program is encoded onto the units during manufacturing so that each unit arrives ready to use. An optional interface for transferring audio programs to the units on site is also available.

Revolutionary power supply

The Basic runs on two alkaline AA disposable batteries, which last up to three months on average. Therefore, no charging racks are needed saving electricity consumption.

Minimum handling, minimum storage space

Running on disposable batteries without the need for charging racks means minimal handling and storage requirements, at minimal expense.

Integrated alarm

The Basic offers a barrier-based alarm system with an integrated detector (optional).

Weather proof

RSF products are well suited to either indoor or outdoor usage. The Basic can be used in conditions of extreme humidity without any ill-effects (with optional tropicalisation).

Reliable

RSF products are built with no moving parts. They combine state-of-the-art electronic design with quality components to achieve incomparable reliability levels. RSF provides a two-year warranty on its products.

Stonehenge opts for the Basic

The Basic was recently chosen for the audio-guided tours at the prestigious World Heritage site of Stonehenge, where 1,100 units are used. The units had to meet stringent requirements. They had to be high quality, reliable audio guides, able to withstand extreme weather conditions, but also require minimal handling and they had to have the ability to be offered on a self-service basis, all at a moderate cost.

It was an obvious choice. It had to be the Basic.

technical specifications

AUDIO GUIDE (ref. PRDB)

Audio parameters

Audio format	High quality SR3 audio compression
Bandwidth	60Hz to 15KHz
Distortion	Below 0.01%
Dynamic	92 dB

General parameters

Recording time capacity	170 min (340 min as an option)
Numbers of languages/versions	32 (maximum)
Number of messages	No limitation
Storage support	Flash Card memory

Buttons

Keypad	12 (0-9; Play/Pause; Stop; Volume +/-)
--------	--

Indicators

Playing	1 green led
Battery Level	1 red led

Battery

Type	2 AA alkaline batteries
Autonomy	300 hours continuous playing = 3 months at 4 hours per day, 25 days per month

Enclosure

Moulded ABS plastic enclosure

Dimensions

258 x 58 x 25 mm

Weight

165 g

Environnement

Temperature	-10°C to 50°C
Relative humidity	0-96%

Warranty

2 years

OPTIONAL ACCESSORIES

Ref. AT Barrier	Antitheft barrier
